

# MICROGOLD MC<sup>®</sup>

**MICROGOLD MC<sup>®</sup>** is a concentrated, all-natural brewers yeast supplement derived from specific strains of *Saccharomyces cerevisiae*. A proprietary manufacturing and drying process preserves the natural components which results in a highly palatable blend of yeast nutrients, yeast cell walls, amino acids, vitamins, and minerals.

To evaluate the efficacy of MICROGOLD, a 42-day weanling pig study (1260 hd) was conducted at a private research facility in Iowa. The study was designed as a randomized complete block design conducted in a swine facility containing 60 pens with four treatment groups in fifteen blocks. Each replicate pen housed 21 animals of a similar starting body weight with gender balanced within each pen.

**RESULT:** An overall improvement in feed/gain ( $P=0.003$ ) compared to the control was observed in the treatment pigs fed MICROGOLD (1 lb/ton).

**RESULT:** Additionally a decrease ( $P<0.05$ ) in feed cost per pound of gain compared to the control treatment was also realized, from \$0.30 to \$0.29.
